SUMMARY

Computer Science graduate with hands-on experience building full-stack, AI-powered, real-time, and multithreaded applications. Proficient in C++, JavaScript, React.js, Node.js, and MongoDB, with strong foundations in DSA, OOP, DBMS, Operating Systems, and Computer Networks.

RELEVANT COURSES

Computer Networking

Operating System

Cryptography

Data Structures & Algorithm

Object Oriented Programming

Database Management System

EDUCATION

B.TECH in Computer Science

Graphic Era Hill University Bhimtal

📅 08/2021 - 10/2025 📍 Bhimtal

GPA

7.52 / 10

EXPERIENCE

Web Development Intern | 3Skill

📅 09/2026 - Present

- Developing full-stack web applications using the **MERN stack (MongoDB, Express.js, React.js, Node.js)**.
- Building responsive UI, integrating **REST APIs**, and implementing backend functionality.
- Debugging, optimizing, and collaborating on real-world web development projects.

Software Engineer – Forage Virtual Job Simulation

- Implemented **frontend updates based on product feedback** and developed backend updates to support new application features.
- Analyzed **feature releases and product requirements**, enhancing the application for the **YC Internship Program**.

TECHNICAL SKILLS

Languages

C++, JavaScript, SQL, HTML5, CSS3

Frameworks & Libraries

React.js, Vite, Tailwind CSS, Framer Motion, Recharts, Node.js, Express.js, Mongoose, Axios

Databases

MongoDB, MySQL

Developer Tools & Platforms

Git, GitHub, VS Code, Postman, Chrome DevTools, NPM, MongoDB Compass, MongoDB Atlas, Linux/Ubuntu, WSL

PROJECTS

Multithreaded HTTP Server

Tech Stack: C++, Linux/Ubuntu, TCP Sockets, POSIX Threads, HTTP, Networking

- Built a **multithreaded HTTP server from scratch in C++** using TCP sockets and POSIX threads to handle multiple client connections concurrently.
- Implemented **HTTP request parsing, response generation, routing, static file serving, and connection handling** without relying on web-server frameworks.
- Designed concurrent request processing using a **thread-per-connection architecture**, improving the server's ability to handle multiple simultaneous requests.
- Applied low-level **networking, socket programming, concurrency, synchronization, and Linux systems programming** concepts to build a modular and maintainable server.

AI Invoice Generator

🔗 <https://ai-invoice-generator-ivory.vercel.app/>

Tech Stack: React.js, Node.js, Express.js, MongoDB, Mongoose, Clerk, Gemini AI, Vercel, Render

- Built a **full-stack AI-powered invoice management platform** with React.js and Node.js, enabling users to create, generate, edit, view, and manage invoices.
- Integrated **Google Gemini AI** for structured invoice generation and implemented **Clerk authentication, protected routes, and user-specific data access**.
- Developed a **MongoDB/Mongoose backend** for persistent invoice storage, invoice history, status tracking, search, filtering, and CRUD operations.
- Implemented **invoice preview, PDF/print export, dashboard analytics, and Paid/Pending status management**, and deployed the application using **Vercel and Render**.

NASA Space Live

🔗 <https://nasa-space-live.vercel.app/>

Tech Stack: React.js, Vite, Tailwind CSS, Framer Motion, Node.js, Express.js, Axios, NASA APIs

- Built a **real-time space intelligence dashboard** integrating NASA DONKI, CNEOS/JPL, GIBS, and NASA Images APIs to display space weather, asteroids, hazards, and Earth imagery.
- Developed an **Express.js backend with Axios and caching** to aggregate external NASA APIs, reduce redundant requests, and provide a centralized data layer for the frontend.
- Implemented visualizations, asteroid detection, space-weather monitoring, Earth imagery, discovery galleries, API health status, auto 60-sec refresh.
